Team Name: sdmay21-
Team Members: Maxwell Wilson, Max Van De Wille, Samuel Massey, Tyler Johnson
Report Period: Aug 17-30

Summary of Progress in this Period

In this period we've gotten introduced to the project and the client we will be working with. We have been provided a plethora of information, including login information for the required services (such as GitHub, AWS, and the like) as well as provided access to the databases and example database operations. We have also gotten access to a lot of data to see what kind of data the company currently processes and how it works in their system.

Pending Issues

Because this is a continuation of a project that has spanned multiple semesters and different student teams, there are some high priority issues with the current software that the DigiClips team would like fixed as soon as possible, but due to our lack of knowledge of their code base this may take some time to help with. Our current priority as the student team is to establish a solid plan of action for what features/functionality need to be implemented over the course of the next two semesters, however at the moment the DigiClips team is prioritizing fixing bugs that currently affect the few clients that use their application.

Another smaller issue is that DigiClips has multiple student teams working on different components of the system, and coordinating between not only members of DigiClips but other student groups may be challenging.

Plans for Upcoming Reporting Period

In the upcoming reporting period, the team will be continuing getting access to all of the information needed for work on the project itself. Gaining this access will allow us to view the code for the frontend and backend, which will give us the ability to start planning out the specifics about the project itself and what it is that DigiClips is wanting us to complete.

Another upcoming plan for the next reporting period will be for our team to gather and get an understanding of what it is we want to achieve for the project. We have a good understanding of what it is that DigiClips wants us to complete, and we will be working with them to get a full list of tasks which we will try to finish by the end of our time working with DigiClips.
